Final Panel Questions

- Where should climate concerns be on the priority list of western water issues?
 - Until our scientific understanding of climate improves, should we just focus on other, better-understood issues such as population growth?
 - Should we consider climate change and/or increasing variability a foregone conclusion?
- How should the western water community respond to the dangers associated with climate change and variability?
 - What should our strategy look like?
 - What specific actions should be taken?
 - Are our water institutions up to the challenge, or are reforms needed?
