Climate Change is Water Change

- Too Much
- Too Little
- Wrong Timing
- Wrong Form
- Wrong Quality

The image shows the cover of a report from the Policy Forum. At the top, there is a dark green horizontal bar with the text 'POLICYFORUM' in white, bold, uppercase letters. Below this bar, the text 'CLIMATE CHANGE' is written in a smaller, green, uppercase font. The main title of the report is 'Stationarity Is Dead: Whither Water Management?' in a large, bold, black font. Below the title, the authors' names are listed in a smaller black font: 'P. C. D. Milly,^{1*} Julio Betancourt,² Malin Falkenmark,³ Robert M. Hirsch,⁴ Zbigniew W. Kundzewicz,⁵ Dennis P. Lettenmaier,⁶ Ronald J. Stouffer⁷'. To the right of the title and authors, there is a short summary in green text: 'Climate change undermines a basic assumption that historically has facilitated management of water supplies, demands, and risks.'

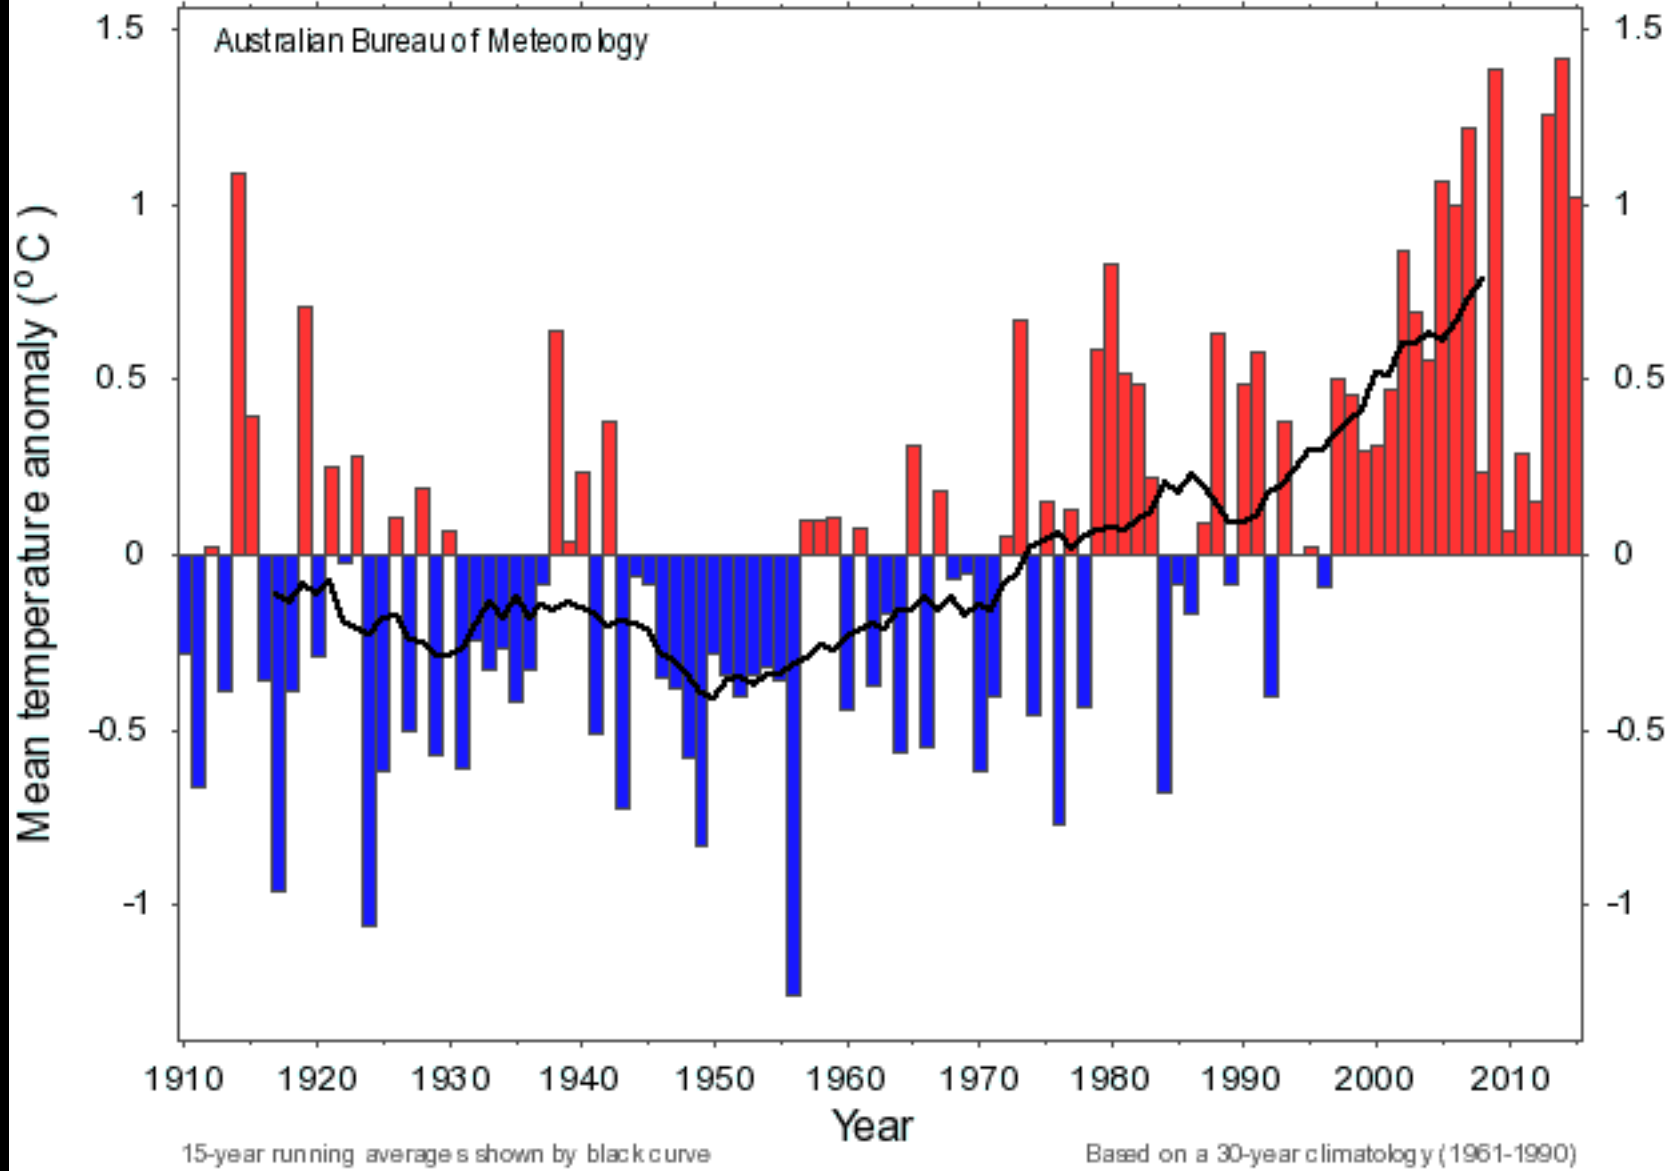

River Murray Natural Flows

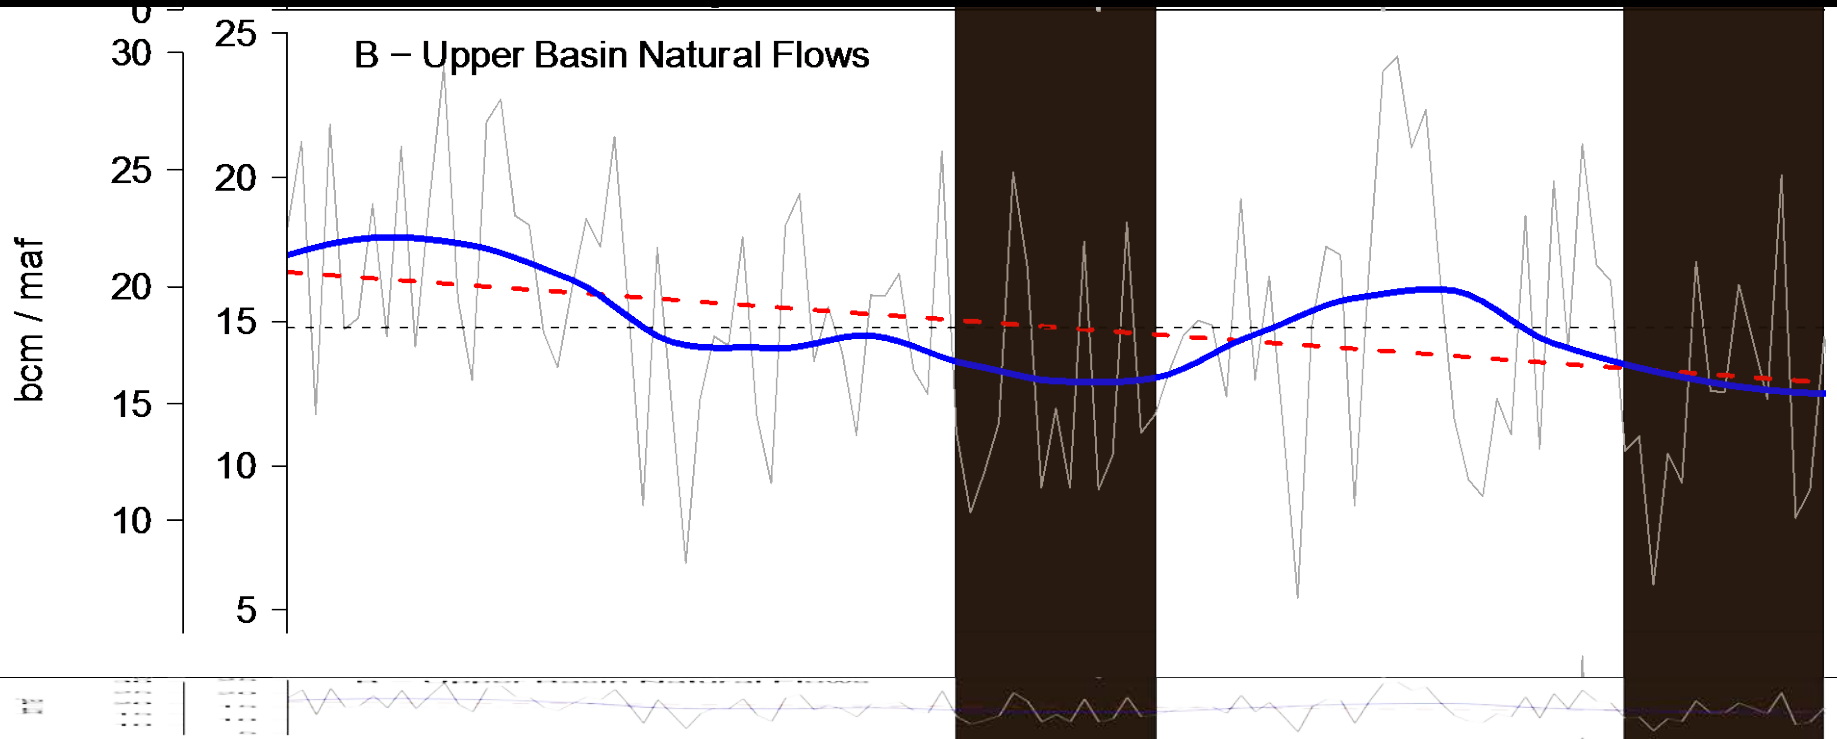

Annual rainfall anomaly - Murray Darling Basin (1900-2015)

Annual mean temperature anomaly - Murray Darling Basin (1910-2015)

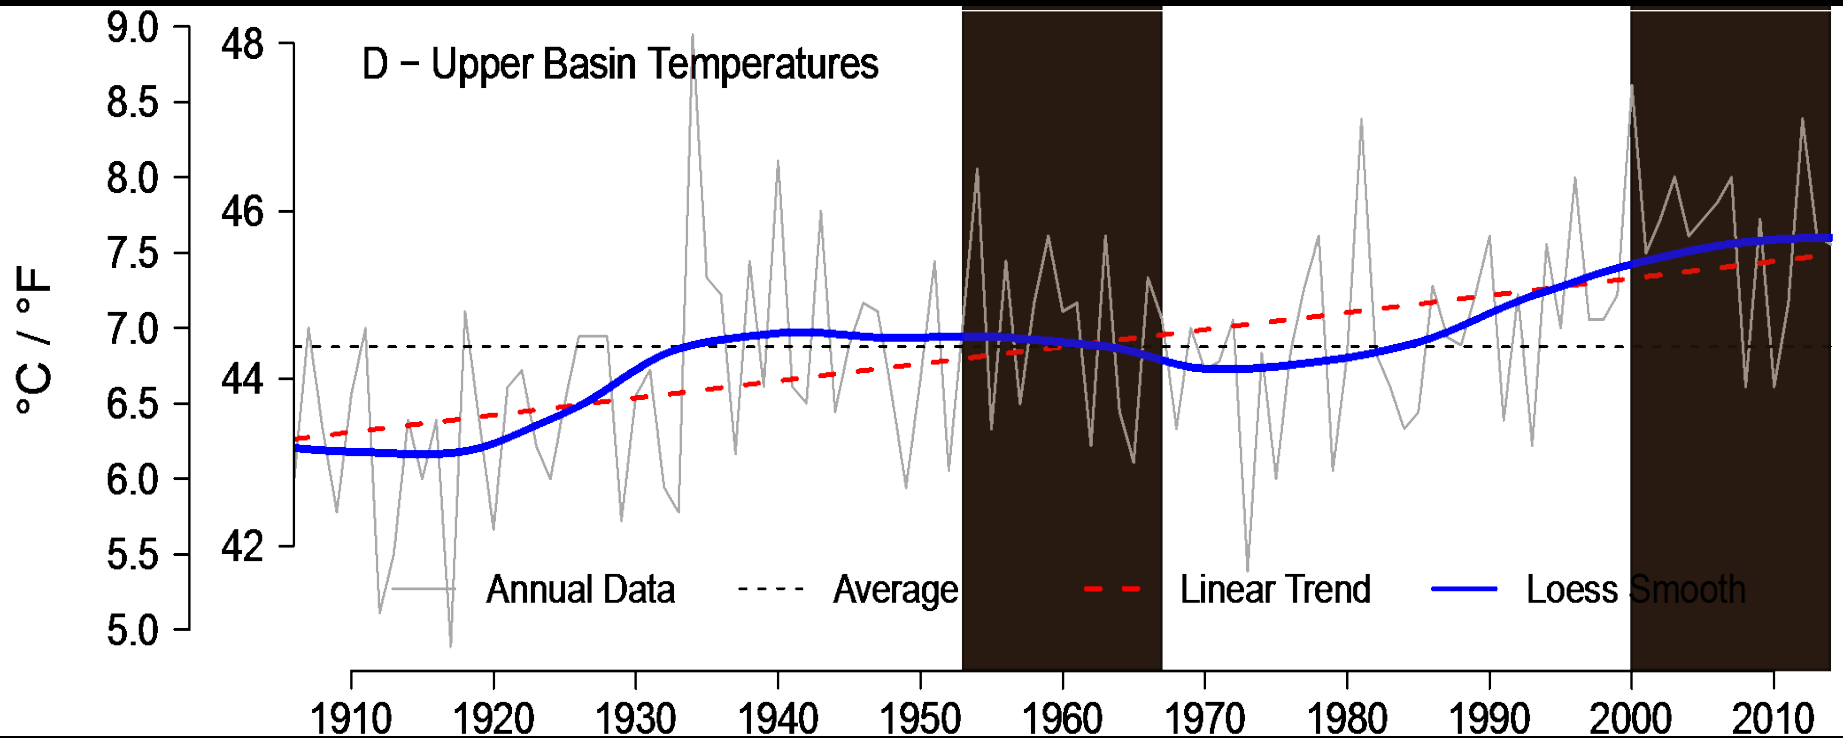

Colorado River Natural Flows

Colorado River Precipitation

Colorado River Temperatures

Australian Climate Change Risk Model

MANAGING WATER IN THE MURRAY-DARLING BASIN UNDER A VARIABLE AND CHANGING CLIMATE

Dealing with climate change in the 2012 Basin Plan
and into the future

Water, April 2015

I Neave, A McLeod, G Raisin, J Swirepik

THE MURRAY-DARLING BASIN PLAN FAILS TO DEAL ADEQUATELY WITH CLIMATE CHANGE

Water, September 2015

Our April issue featured a technical paper titled 'Managing Water in the Murray-Darling Basin Under A Variable And Changing Climate'. The paper caused a bit of a stir and created dispute among Australian scientists. In this opinion piece Jamie Pittock, John Williams and R Quentin Grafton from the Australian National University state their case.

Colorado River Compact III(d)

“The States of the Upper Division will not cause the flow of the river at Lee Ferry to be depleted below an aggregate of 75,000,000 acre-feet for any period of ten consecutive years reckoned in continuing progressive series beginning with the first day of October next succeeding the ratification of this compact.”

US Climate Change Approach

- Federal Planning and Modeling
- Fixation on Median Model Results
- Next to nothing on Extremes
 - MDB Failure
 - CRB Failure

Question of the Day

- Is it time for the Colorado River Basin states to discuss where climate change flow risk should fall outside of III(d)?
- My answer:
 - Absolutely YES.
 - Climate Change Impacts already being felt but not acknowledged outside of hand waving
 - III(d) wholly inadequate
 - Part of Structural Deficit is a Climate Change Problem
